PROPOSED TECHNICAL DIRECTIVE

NO. 4006C

TO: Headquarters DATE: 10-29-63

SUBJECT: Replacement of "A" Camera System Temp Sensors

1. The purpose of this Technical Directive is to direct Fairchild Space and Defense Systems (FSDS) to replace the existing strip type temp sensors on the "A" Camera system with Micro Systems TE 3D-2000 button type temp sensor and its C/N bridging circuitry.

2. Justification:

2.1 This button type temp sensor has a negligible self-heating characteristic and provides a truer temperature indication than the strip type sensor with the self heating feature.

2.2 The button type can be calibrated easier and is being standardized on other programs.
